

EMFACE FOR BELL'S PALSY

A Bell's Palsy diagnosis can feel frightening and isolating. The sudden loss of movement on one side of the face affects not just how you look, but how you communicate, connect with others and feel about yourself. Recovery can be a slow process – and having access to the right clinical support makes a real difference.

Bell's Palsy is a condition caused by inflammation or damage to the facial nerve, resulting in sudden, temporary weakness or paralysis on one side of the face. It can affect the ability to smile, close the eye, and control facial expressions, and can have a significant impact on confidence and quality of life.

EMface is FDA cleared for Bell's Palsy and offers a clinically supported, non-invasive approach to facial nerve rehabilitation. By stimulating the facial muscles using HIFES technology and supporting tissue health through radiofrequency, EMface can help to reactivate and strengthen weakened facial muscles, supporting the recovery of movement, tone and symmetry.

DELIVERED BY A CLINICAL NURSE SPECIALIST

Every EMface treatment at Neuromed Clinic is delivered by a qualified Clinical Nurse Specialist – ensuring the highest standard of clinical care, personalised assessment and safe, evidence-based practice throughout your treatment journey.

AN ADDED BENEFIT

Many clients undergoing EMface for jaw health also notice visible improvements in facial tone, lift and skin quality during their treatment programme – a natural result of the same muscle-stimulating and collagen-building technology at work.

TAKE THE FIRST STEP TOWARDS RELIEF

Speak to our Clinical Nurse Specialist today to book your EMface consultation and find the right path forward. Consultations are €50, fully redeemable against the cost of your treatment.

EMFACE®

EMFACE MEDICAL

RELIEF FROM JAW PAIN, GRINDING OR TENSION.

EMface is FDA cleared for the treatment of Bruxism (teeth grinding), TMJ disorder and Bell's Palsy – offering a non-invasive, drug-free solution for some of the most common and under-treated conditions affecting the face, jaw and nervous system.

37%

REDUCTION IN WRINKLES

23%

OVERALL LIFTING EFFECT

31%

INCREASE IN MUSCLE TONE

FDA CLEARED

BRUXISM, TMJ & BELL'S PALSY

HOW EMFACE WORKS FOR BRUXISM & TMJ

Bruxism (teeth grinding and clenching) and TMJ disorder affect millions of people – often without them realising it. Traditional treatments focus on managing these symptoms.

EMface treats the root cause: overactive, hypercontracted jaw muscles.

EMface uses synchronised radiofrequency and High-Intensity Facial Electrical Stimulation (HIFES) to reach deep into the masseter and surrounding jaw muscles.

This targeted stimulation works to relax chronically overactive muscles, reduce tension and retrain muscle behaviour over the course of a treatment programme.

The result is meaningful, lasting relief – without medication, injections or surgery.

WHAT TO EXPECT

FDA CLEARED

Clinically validated for Bruxism, TMJ & Bell's Palsy – not experimental

DRUG-FREE

No muscle relaxants or ongoing medication required

NON-INVASIVE

No injections, no surgery, no anaesthetic required

20-MINUTE SESSIONS

Each session fits easily into a busy schedule

YOUR TREATMENT PROGRAMME

Most clients achieve optimal results with a course of 4-6 sessions, each lasting just 20 minutes. Sessions are typically spaced one week apart.

Many clients begin to notice an improvement in muscle tension and jaw comfort within the first few sessions, with results continuing to develop throughout the programme.

Our Clinical Nurse Specialist will assess your symptoms and design a personalised plan to address your specific needs – whether that's jaw pain, grinding, tension headaches, or a combination of all three.

WHAT IT TREATS

- Jaw pain or stiffness
- Morning headaches or migraines
- Neck and shoulder tension
- Worn or sensitive teeth
- Clicking or locking of the jaw
- Disrupted sleep

IS EMFACE RIGHT FOR YOU?

EMface is suitable for most adults experiencing Bruxism, TMJ disorder, chronic jaw tension or Bell's Palsy. However, it is not suitable for everyone.

Our Clinical Nurse Specialist will carry out a full suitability assessment at your consultation before any treatment begins, ensuring your safety and the best possible outcome.
